

Doowuese Michelle Swem

Software Development | Product Thinking | Performance Optimization

Berlin, Germany · (+49) 1748620788 · swemmichelle990@gmail.com · linkedin.com/in/michelle-swem-b7812b183
· github.com/michelleswemdo

Frontend Engineer with 5+ years of experience in JavaScript, TypeScript, Angular, React, Vue, and NodeJS, focused on building intuitive, high-quality user interfaces. Experienced in developing scalable web applications and collaborating in cross-functional teams to deliver impactful product features. Product-minded, detail-oriented, and eager to grow in a fast-paced startup environment. Available immediately.

SKILLS

- Languages: JavaScript, TypeScript, Go
- Frameworks and Libraries: HTML, CSS/SCSS, Tailwind CSS, Angular, React, NextJS, Vue, Nuxt, NodeJS
- State and Data Management: Redux, TanStack Query, Vuex, Pinia, GraphQL
- Testing: Jest, Vitest, Cypress, Playwright, Testing Library
- Build Tools and DevOps: Docker, Webpack, Vite, Git, Figma, Storybook

SELECTED PROJECTS

AI-NATIVE BOOKING APP [Live Demo](#) · [GitHub](#) (PERSONAL PROJECT)

- Built a full-stack booking application using Next.js (App Router), React, and TypeScript, with Google authentication via NextAuth and a Supabase backend for real-time data persistence.
- Integrated the Vercel AI SDK with the Groq provider to generate intelligent assistant replies, enabling users to interact with the booking system through natural language instead of traditional form flows.
- Shipped the product end-to-end independently, from database schema and auth flow to AI integration and UI, demonstrating full-stack ownership and rapid execution.
- Designed a responsive, accessible UI with Tailwind CSS, implementing dynamic calendar interactions using react-day-picker and date-fns for precise scheduling logic.

EXPERIENCE

SOFTWARE FRONT-END ENGINEER | MERCURIE

09/2024 - 11/2025

- Architected responsive, accessible UIs for the Mercurie dashboard and marketing site using TypeScript and React, serving 1000+ monthly active users.
- Built 25+ reusable components from Figma designs with Tailwind CSS, reducing feature development time by 40% through standardized UI patterns and documentation in Storybook.
- Improved Core Web Vitals scores by 35% through bundle optimization, memoization, virtualization, and code splitting across data-intensive views.
- Designed and integrated gRPC/REST APIs with backend engineers using Go, reducing integration bugs by 50% through clear API contracts and typed interfaces.
- Increased engineering velocity by 30% by implementing AI-assisted workflows with Cursor and Gemini Code Assist across the frontend team.
- Collaborated cross-functionally with Product Managers and UX Designers to design and deliver intuitive, user-centered interfaces, translating complex requirements into scalable frontend solutions.
- Achieved 85% test coverage by implementing unit and E2E testing with Vitest and Playwright, reducing production incidents by 60%.
- Optimized CI/CD pipelines using Vite, Docker, and Google Cloud, cutting build times by 45% and deployment failures by 70%.

- Implemented secure authentication flows using Firebase Authentication, including OAuth providers like Google, enabling seamless user sign-in, session management, and protected route handling across the application.

FRONT-END ENGINEER | SBSC**06/2023 - 09/2024**

- Built highly interactive, user-facing components for QuickBucks 3.0, Access Bank's digital loan platform, using React, TypeScript, and Ant Design, serving over 1 million users.
- Architected scalable application state management with Redux Toolkit, streamlining data flows and reducing feature complexity across the platform.
- Established comprehensive unit and E2E test suites with Jest, Cypress, and React Testing Library, cutting bug reports by 40% and improving long-term code maintainability.

FRONT-END ENGINEER | CLEVER DIGITAL LIMITED**10/2022 - 05/2023**

- Refactored legacy codebases across two production applications, improving runtime performance by 50% and significantly increasing code reusability.
- Accelerated Clever Moni web app performance using bundle splitting, lazy loading, and image compression, achieving 30% faster load times.
- Improved platform accessibility from below 70 to 93 on Lighthouse, implementing WCAG 2.1 standards and ARIA roles across core QuickBucks UI components.

FRONT-END DEVELOPER | HECKERBELLA LIMITED**12/2021 - 09/2022**

- Delivered three major projects on schedule, driving a 20% improvement in team success metrics.
- Boosted React application performance by 30% via chunk-splitting, asset optimisation, and targeted memoization.
- Built an Angular customer dashboard featuring intuitive data visualisations, collaborating with backend engineers to simplify and surface complex datasets.

FRONT-END DEVELOPER | AZEELO DIGITAL INTERNATIONAL**11/2019 - 11/2021**

- Resolved critical bugs in the Propensity4 web app, improving user experience scores by 40%.
- Led code reviews and standardised best practices, boosting team productivity by 15% and improving overall code reliability.
- Built a reusable component library by tailoring Material UI components to product needs, reducing code redundancy by 40% and speeding up development cycles by 35%.

EDUCATION

UNIVERSITY OF AGRICULTURE, MAKURDI, NIGERIA

Bachelor of Science, Major in Mathematics/Computer Science, 2016
